## Scan time

### Scan started

2019-03-13T15:29:00+00:00

### Scan finished

2019-03-13T16:01:49+00:00

## Finding summary

● Arbitrary Command Execution (ACE/RCE)	5
● Remote Code Execution (RCE)	1
● XML External Entity (XXE)	1
● Remote File Inclusion (RFI)	1
● Local File Inclusion (LFI)	3
● Cross Site Scripting (XSS)	4
● Cross Site Request Forgery (CSRF/XSRF)	1
● Directory Listing	6
● PHP Easter Egg	1
● X-Frame-Options / Missing Header (Clickjacking)	1
● Deprecated PHP Version / End of Life	1
● X-XSS-Protection / Disabled Auditor	1
● Apache Icon Leakage	1
● Referrer-Policy / Missing Header	1
● Host Header Injection / Potential Open Redirect	1

## Scan settings

Crawl subdomains	No
Scan as device	Detectify

●	Content-Security-Policy / Missing Header	1

●	Email Enumeration	2
●	HTML Comments	2

# ● Arbitrary Command Execution (ACE/RCE)

## What does this mean?

It's possible for an attacker to execute operating system commands on the server.

## What can happen?

An attacker can fully compromise the system.

OWASP - XML External Entity (XXE) Processing  
WIKIPEDIA - XML external entity attack  
MISC - What is an XXE Attack?

# ● Remote File Inclusion (RFI)

## What does this mean?

The target website can be tricked into reading and executing a file hosted on a remote site.

## What can happen?

An attacker can execute malicious code on the web server and thereby most likely be able to steal user logins and other sensitive information.

## Summary

# ● Cross Site Scripting (XSS)

## What does this mean?

An attacker can inject JavaScript into the victim's browsers, which will execute under the vulnerable domain.

our knowledge base (<http://support.detectify.com/customer/portal/articles/1711512-cross-site-scripting>) for more information.

## What can happen?

An attacker can use this to steal cookies, phishing, tabnabbing etc., which can lead to stolen information and hijacked user accounts.

# ● Cross Site Request Forgery (CSRF/XSRF)

## What does this mean?

The site doesn't check for tokens or make sure that the request really is from the user in any other way.

here (<http://support.detectify.com/customer/portal/articles/2792245-csrf>).

## What can happen?

An attacker can force a victim to perform unwanted actions at the site.

## Summary

Entry	Found at	CVSS
1	<a href="http://95.179.226.178/upload/example1.php">http://95.179.226.178/upload/example1.php</a>	5.8

# 1. Cross Site Request Forgery (CSRF/XSRF)

## Resources

DETECTIFY - CAPTCHA does not prevent CSRF

## ● Directory Listing

### What does this mean?

Directory Listing is enabled which means an attacker can see all files in a directory.

### What can happen?

An attacker can use this to discover sensitive files.

<h1>Public Domain Icons</h1>

<p>These icons were originally made for Mosaic for X and have been included in the NCSA httpd and Apache server distributions in the past. They are in the public domain and may be freely included in any application. The originals were done by Kevin Hughes (kevinh@kevcom.com). Andy Polyakov tuned the icon colors and added few new images.</p>

<p>If you'd like to contribute additions to this set, contact the httpd documentation project <a href="http://httpd.apache.org/docs-project/">http://httpd.apache.org/docs-project/</a>.</p>

<p>Almost all of these icons are 20x22 pixels in size. There are alternative icons in the "small" directory that are 16x16 in size, provided by Mike Brown (mike@hyperreal.org).</p>

<h2>Suggested Uses</h2>

<p>The following are a few suggestions, to serve as a starting point for ideas. Please feel free to tweak and rename the icons as you like.</p>

<table>

<tr>

<td width="25%">

<a href="a.gif"> a.gif</a>

<br /><a href="a.png"> a.png</a></td>
</tr>
<tr><td colspan="4">This might be used to represent PostScript or text layout
languages.</td>
</tr>

<tr>
<td width="25%">
<a href="alert.black.gif"> alert.black.gif</a>
<br /><a href="alert.black.png"> alert.black.png</a></td>
<td width="25%">
<a href="alert.red.gif"> alert.red.gif</a>
<br /><a href="alert.red.png"> alert.red.png</a></td>
</tr>
<tr><td colspan="4">These can be used to highlight any important items,
such as a README file in a directory.</td>
</tr>

<tr>
<td width="25%">
<a href="back.gif"> back.gif</a>
<br /><a href="back.png"> back.png</a></td>
<td width="25%">

## ● X-Frame-Options / Missing Header (Clickjacking)

### What does this mean?

Clickjacking, also known as a "UI redress attack", is when an attacker uses multiple transparent or opaque layers to trick a user into clicking on a button or link on another page when they were intending to click on the top level page.

### What can happen?

With a carefully crafted combination of stylesheets, iframes, and text boxes, a user can be led to believe they are typing in the password to their email or bank account, but are instead typing into an invisible frame controlled by the attacker.

Note that this is very application dependent. It doesn't make much sense to implement a patch for an API endpoint. There must be an action (button or similar) that an attacker can interact with for this to be considered a vulnerability.

## What does this mean?

The HTTP server discloses what type of technology that is currently used on the HTTP-server.  
here (<http://support.detectify.com/customer/portal/articles/2792281-technology-disclosure>).

## What can happen?

An attacker can use that information to look up known vulnerabilities in the specific technology and then use them against the website.

## ● Host Header Injection / Potential Open Redirect

### What does this mean?

It's possible to cause the web application to redirect the victim to a site of the attacker's choice.

### What can happen?

An attacker may, by redirecting the user to the attacker's site, launch an online phishing scam and steal user credentials or other sensitive information.

### Summary

## Crawled URL's

### What does this mean?

This finding is generated for debugging purposes. A link is associated with this finding containing a CSV file with all crawled URL's.

### What can happen?

A scan might take too long due to representative content on the application. Vulnerabilities may also be missed if Detectify lack coverage in some area of the application. If you suspect Detectify can perform better, then take a look at the associated CSV.

### Summary

Entry	Found at	CVSS

## What does this mean?

The web site reveals one or more email addresses in plain text.

here (<http://support.detectify.com/customer/portal/articles/2792087-email-enumeration>).

## What can happen?

Spammers can easily gather these email addresses and use them in spam campaigns. An attacker may also use those email addresses for spear phishing and other attacks.

## Summary

Entry	Found at	CVSS
1	<a href="http://95.179.226.178/icons/">http://95.179.226.178/icons/</a>	0
